## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 16-30, drawn to a system for actuating an emboli containment device, classified in class 604, subclass 96.01.
- II. Claims 31-50, drawn to an adaptor for controlling actuation of an expandable device, classified in class 604, subclass 99.01.

The inventions are distinct, each from the other because of the following reasons:

**Inventions I and II** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because there are alternative ways to enable expansion of an expandable device, and therefore the other types of adaptors that conventional in the art can be utilized to enable expansion.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
